

HOLD TIGHT WITH CLOSED ANGLE CORNER BEADS

- Closed Angle corner beads are made with an 81-degree angle rather than the standard 90 degrees to help finishers get great results over bad framing
- Our Closed Angle beads allows for micro adjustments to get perfect lines without buckling or flare outs
- Ideal for drywall pros familiar with metal corner beads – our beads feel similar to metal during installation
- Closed Angle Corner Bead and Rigid Closed Angle Corner Bead (pictured) feature a new hole pattern designed to reduce mud waste and speed up installation
- Three styles of Closed Angle beads to choose from: the standard, soft-profile Closed Angle (C4010), the sharp-edged Rigid Closed Angle (CA10R) and the larger Rigid Jumbo Closed Angle (CA10RJ, not shown)
