## CODE COMPLIANCE, WITHOUT ALL THE EXTRA STEPS

- **Built to Last:** Unlike traditional wet-applied firestopping, which may shrink and crack over time, these products are designed to remain permanently flexible and provide a resilient seal that is mold-resistant and rust-proof for the entire lifetime of your wall assembly.
- **More Efficient:** Save on installation time and labor costs by eliminating the need for fire sealants and fire spray at the head of wall.
- **Easy to Inspect:** Brightly colored vinyl makes it easy for inspectors to identify the accessory as being rated for fire or sound, and since they install fully cured, they can be inspected the same day they're applied.
