

## SOUND GASKET: SOUNDPROOFING, LOUD AND CLEAR

- Code compliance transformed: Sound Gasket is the industry's most advanced solution for dampening the passage of sound in wall joints.
- Speedy soundproofing: installation is up to five times faster than using acoustical caulks, with the same or better STC values.
- Foolproof: achieve code-compliant wall assemblies far more easily, eliminating installer errors that cause failed inspections and callbacks.

“You pretty much can't make a mistake on it. You can literally get your lowest man, your novice carpenter, to install this product with real ease. You make sure it's tight to the floor, stick it to the wall and you're done. It's real simple.”

- Paramount Contracting Project Manager Ryan Roberts
